

AARON CHRISTOPHER TANHAR

aaronchristopher69 \diamond christopher.19072@mhs.its.ac.id \diamond lordronz.github.io

Education

Institut Teknologi Sepuluh Nopember Bachelor Degree

Major in Computer Engineering.

Learn embedded systems, web development, networking, machine learning, and computer vision. **2019 – Present**

CGPA: 3.59/4.0

SMA Negeri 16 Surabaya High School Degree

2016 – 2019

Study in the mathematics and science field of study.

Skills

Proficiency in some Web Development Stack (**MongoDB**, **Express.js**, **React.js**, **Node.js**, **Vue.js**)

Using **Linux** and **Git** in daily life.

Fairly skilled in **C/C++**, **Python**, **TypeScript**, a little bit of **Go**, and know the basics of some other programming languages.

Able to serve a website using **Nginx** on a server.

Have used **L^AT_EX** to make a professional Document.

Organization

B201 Telematics Lab, Lab Assistant

March 2021 - Present

Help professors in their research.

Assist junior students in the practical training.

Multimedia And Game Event 6, Junior Web Dev

June 2020 - November 2020

Junior programmer in creating a website for the event.

Multimedia And Game Event 7, Lead Web Dev

June 2021 - November 2021

Lead programmer in creating a website for the event.

Projects

ronz-amogus *ronz-amogus*

2021 – present

- Discord bot for fun, made with python using discord.py

Hello World *hello world*

Mar. 2020 – Dec. 2020

- Actually an assignment for Advanced Programming. It's a top-down shooter game built with C++ SFML.

Netflix Movies REST API *Netflix REST API*

March 2021

- b201 telematics lab recruitment project. It's a RESTful API written in Javascript using built-in http library. Using docker and nginx for deployment.

ASCII Art Generator *ASCII Art Generator*

Sept. 2020

- This python program can convert an image into an ascii art representation
It's using numpy and PIL, checkout the README file !

Portfolio Website *My portfolio website*

Nov. 2021

- This website was made with Nextjs, tailwind css, reactjs, and by using Typescript.

Viktori PSJ *Viktori PSJ*

Oct. 2021

- This is a final project for the system programming course
So we made a building fire detector using arduino uno, and we store the acquired data in the server. The server itself was made with TCP socket, in pure C. We made it with multiprocessing, multithreading, and signal programming in mind.

Google Form Response with Python *python-google-form-response*

April 2021

- I made this program to automate google form response for my Probability and Statistics course.
Using it to make a post request based on the form and we could customize how it should respond
A pretty useful program.

There are many more! Check out my github
